PREFACE

Weeds are an important constraints in crop production. They compete with crop plants for nutrients, water and space and reduce crop productivity substantially. Weed management in an important activity, which is both labour intensive and expensive.

Weed identification is an important step in weed management strategy. In this publication an attempt has been made to compile information on vernacular (local) names of important weeds. The information has been collected through AICRP-WC Centres and also from various publications. The information published is far from complete. But a beginning has been made and we hope to up date this in due course of time.

I am thankful to Dr A.K. Gogoi, Dr R.P. Dubey and Dr J.S. Mishra for editing and also thankful to Mr Sandeep Dhagat for type setting, Mr V.K.S. Meshram for designing the cover page. I would like to thank all the Principal Investigators of All India Coordinated Research Programme on Weed Control for supplying the relevant information and Sushil Rajput, Sanjeev Bahuguna, Sanjay Jain, Manish Ahuja, Mirazuddin Ahmed and Namrata Jain for collecting information from different sources

We welcome feed back from the readers in updating information and for any other comments for further improvement of the contents.

N.T. Yaduraju
Director
